

WHAT TO DO IF YOU TEST POSITIVE FOR COVID-19

(AKA isolation guidance)

1. Start isolating yourself right away.

- Stay home except to get medical care.
- Stay away from everyone else in your household (stay in a separate room, use separate bathroom if possible, etc.).
- Tell your employer you have COVID-19.

"Resolving symptoms" means your symptoms have gotten noticeably better.

Some symptoms (like fatigue and loss of smell) may last a longer time. If you have questions, please call your medical provider to discuss.

2. Think of the people you were around 48 hours before you developed symptoms or tested positive (whichever came first).

- Tell them you tested positive so they can follow quarantine guidance.

CDC guidelines for the general population, regardless of vaccination status:

3. On Day 5, do you have no symptoms or are your symptoms resolving?

- If yes, you can stop isolation on day 6. Continue to wear a well-fitting mask around others through day 10.
- If no, you should not stop isolation - continue isolating until symptoms resolve or 10 days have gone by since you tested positive or first developed symptoms. If you have a fever, continue to isolate until your fever goes away. If your symptoms are not resolving or are worsening, seek medical care.

See page 3 to see how to count days after testing positive

When we say wear a well-fitting mask, we mean a surgical, KN95, or N95 mask is preferred over a cloth mask.

Additional recommendations from the Kalamazoo County Health Department (KCHCS):

Taking these extra steps can further reduce your risk of spreading COVID-19 to others.

- **Take a rapid antigen test on day 5 of isolation.**
 - If negative, end isolation on day 6 and wear a mask around others through day 10.
 - If positive, continue to isolate through day 10 or until you get a negative rapid antigen test result, if you wish to continue testing.
- **If you end isolation on day 6, be more cautious through day 10. Limit being around others as much as you can.**
- **If you are often around vulnerable populations (e.g., immunocompromised or elderly people):**
 - Consider continuing isolation for longer (a full 10 days).
 - If you decide to stop isolation before 10 days, take a rapid antigen test. If positive, consider isolating for the full 10 days or until you test negative if you choose to test again.

*These are guidelines for the general population.

Certain settings like schools and health care facilities may have additional guidance.

WHAT TO DO IF YOU'RE EXPOSED TO SOMEONE WITH COVID-19

(AKA quarantine guidance/guidance for close contacts)

CDC guidelines for the general population:

Note: if you have had COVID-19 in the last 90 days, you do not need to quarantine if exposed.

See pages 3-4 to see how to count days after being exposed

If you...

- are fully vaccinated and have gotten a booster, **OR**
- got your 2nd dose of Pfizer or Moderna vaccine within the last 6 months, **OR**
- got your initial dose of Johnson & Johnson vaccine within the last 2 months:

Then you should...

- Wear a well-fitting mask around others for 10 days.
- Get tested (PCR or rapid antigen) on day 5, if possible. If positive, follow isolation guidance.

*If you develop symptoms, avoid others and get tested (PCR or rapid antigen). If positive, follow isolation guidance. If negative, stay home until symptoms resolve. If symptoms worsen or change, follow up with your medical provider and consider getting another COVID-19 test.

If you...

- are not vaccinated, **OR**
- got your 2nd dose of Pfizer or Moderna vaccine more than 6 months ago and have not gotten a booster, **OR**
- got your initial dose of Johnson & Johnson vaccine more than 2 months ago and have not gotten a booster:

Then you should...

- Stay home (quarantine) for 5 days. Then continue to wear a well-fitting mask around others for 5 more days.
- If you can't quarantine, you must wear a mask around others for 10 days. Keep activities to essential tasks only.
- Get tested (PCR or rapid antigen) on day 5, if possible. If positive, follow isolation guidance.

*If you develop symptoms, avoid others and get tested (PCR or rapid antigen). If positive, follow isolation guidance. If negative, stay home until symptoms resolve. If symptoms worsen or change, follow up with your medical provider and consider getting another COVID-19 test.

When we say wear a well-fitting mask, we mean a surgical, KN95, or N95 mask is preferred over a cloth mask.

Additional recommendations from the Kalamazoo County Health Department (KCHCS):

Taking these extra steps can further reduce your risk of spreading COVID-19 to others.

- In high-risk, congregate settings (like long-term care facilities, jails, etc.) **or** if you are often around vulnerable populations (e.g., immunocompromised or elderly people)
 - Consider staying home/quarantining for a full 10 days after exposure

*These are guidelines for the general population.

Certain settings like schools and health care facilities may have additional guidance.

How to count days after testing positive or being exposed to COVID-19

IF YOU TEST POSITIVE

SUN	MON	TUE	WED	THU	FRI	SAT
<p>You get a positive test result or start having COVID symptoms. Start isolation.</p> <p>Day 0</p>	Day 1	Day 2	Day 3	Day 4	<p>If you have no symptoms or if symptoms are resolving, this could be last day of isolation</p> <p>+ Day 5</p>	<p>If you have no symptoms or if symptoms are resolving, done with isolation*</p> <p>Day 6</p>
Day 7	Day 8	Day 9	Day 10	Day 11	<p>*Continue to wear a well-fitting mask when around others until Day 11</p> <p>+ KCHCS recommendation: take a rapid antigen test this day to determine next steps</p>	

KCHCS recommendation: if you're often around vulnerable populations (e.g., immunocompromised or elderly people), consider continuing isolation for a full 10 days. If doing this, Day 11 would be when you are done with isolation. If you are a healthcare worker, see the CDC "Managing Healthcare Personnel" guidelines for details regarding health care workers.

IF YOU'RE EXPOSED TO SOMEONE WITH COVID-19

And you...

- are fully vaccinated and have gotten a booster, OR
- got your 2nd dose of Pfizer or Moderna vaccine within the last 6 months, OR
- got your initial dose of Johnson & Johnson vaccine within the last 2 months:

SUN	MON	TUE	WED	THU	FRI	SAT
<p>You're exposed. Start wearing well-fitting mask around others.</p> <p>Day 0</p>	Day 1	Day 2	Day 3	Day 4	<p>Get tested on this day if possible.</p> <p>Day 5</p>	Day 6
Day 7	Day 8	Day 9	Day 10	<p>You may stop wearing a well-fitting mask around others.</p> <p>Day 11</p>		

KCHCS recommendation: in high-risk, congregate settings (like long-term care facilities, jails, etc.) or if you are often around vulnerable populations (e.g., immunocompromised or elderly people), consider staying home/quarantining for a full 10 days after exposure. If doing this, Day 11 would be when you can stop quarantining. If you are a healthcare worker, see the CDC "Managing Healthcare Personnel" guidelines for details regarding health care workers.

*These are guidelines for the general population. Certain settings like schools and health care facilities may have additional guidance.
